Writing a data plan

Why do I need a data management plan?
- Duke policies related to data management, sharing, and retention
- Funding agency policies related to data management, sharing, and retention
- Details on the NSF data management plan requirements

Sample plans/templates
- Duke-specific guidance on writing a data plan for NSF (PDF document)
- DMPTool - data management planning toolkit from the California Digital Library
- ICPSR Sample Data Management Plan

Managing your data
- The data management process - thinking it through from beginning to end of your project life-cycle
- Storage and backup - please ask your IT provider to contact askdata@duke.edu to discuss how to include appropriate data management practices into planning for data storage and backup.
- Metadata - describing your data to facilitate later use
- Data archiving and preservation - making sure your data is around for a long time

Sharing your data
- Data repositories - places to deposit and share your data
- Licensing and intellectual property - how may others use your data?
- Data citation - getting credit for what you've shared, and giving credit to others for what you've used

Get help at Duke

This web site will help get you started with information on effective management of data you are creating through your research, including developing a data management plan for your grant or project proposal, archiving data at the end of your project, and sharing data with other researchers as appropriate.

If you're a member of the Duke community, Library Data and GIS Services is available to help you with your data management planning. Contact askdata@duke.edu or see our walk-in consulting schedule. We can advise you and connect you with others who may be able to provide the support you need to execute your data management plans.

Other sources of help at Duke related to data management are also available.

Why manage and share your data?

Funding Agency Requirements
Many funding agencies require data management plans for different reasons. Tailor your plan to the goals and requirements of the funding agency. Funders typically ask how you will:
- Protect confidentiality, consent, and safety of research subjects
- Promote data sharing and transparency
- Supports efforts to verify and replicate research findings

Transparency and Replication of Research Findings
- Replication relies on clear documentation of data and changes used in analyses
- Reuse of data for new applications is common in most disciplines
- Requests for data may follow from publication of results, and advance preparation simplifies the response process

Data Preservation and Annotation
- Documentation of data items and structure at the time of compilation reduces the time needed to understand data organization and contents should the data be needed in future
- Duke requires the retention of research data and pertinent notes for at least 5 years after completion of a project
- Early attention to data documentation and preservation plans reduces the effort required to transition to permanent storage
- Changes in research staff impact the progression of a research project to a lesser extent with clear documentation and planning
- Preservation in a data repository provides an additional backup for your research data

Citations and Recognition
- Data repositories provide another route to the discovery of your research and can increase the visibility of your work, especially when used widely

Data management guidance elsewhere

Some sources of guidance on data management from other universities:
- University of Wisconsin-Madison Research Data Services
- University of Virginia Scientific Data Consulting Group
- MIT Data Management and Publishing
- ICPSR Guidelines for Effective Data Management Plans
- Online course on data management from the EDINA National Academic Data Centre in the UK
Data Management Planning Workshop

This page discusses the importance of creating a data management plan for access, sharing, and preservation. It emphasizes the need for data to be made open for society to reap the full benefits from scientific endeavors. The Panton Principles, launched in 2010, encourage the sharing of research data, emphasizing the importance of making broad datasets accessible.

The page outlines the steps involved in creating a data management plan, including defining research data, planning the research, writing the plan, data preservation, citing data, best practices, and DMP examples from Manoa.

Key points include:
- **Data Life Cycle**
  - Planning the Research: What data will be collected? How long should the data be stored? Who owns the data?
  - Create a Data Management Plan: What metadata or standardized tags will you use? What documentation is needed to keep the data accessible throughout the project and after?
  - Collect Data and Documentation: Back up data and documentation in at least three places.
  - Analyze data: Leave your original data intact using copies to perform analyses.
  - Prepare Data For Sharing: Datasets should be in file formats compatible with repository support.
  - Archiving and Preservation: Add to metadata, include published research associated with data.
  - Deposit Data: Complete forms for depositing data in repository.

- **Defining Research Data**
  - United States Circular No. A-110
  - National Institutes of Health (NIH) Data Sharing Policy

- **Questions?**
  - If you have questions about data curation and preservation at UH Manoa, contact
    - Sara Rutter, science librarian, srutter@hawaii.edu
    - Beth Tilllinghast, ScholarSpace librarian, betht@hawaii.edu

- **Feedback**

Data Management Planning for Researchers at NC State

What is a Data Management Plan (DMP)?
A data management plan is a formal document that outlines what you will do with your data during and after you complete your research. It describes the data that will be created, the standards used to describe the data (metadata), who owns the data, who can access the data, how long the data will be preserved (and/or made accessible), and what facilities and equipment will be necessary to disseminate, share, and/or preserve the data. Several funding agencies require or encourage the development of data management plans for research.

Specific guidelines for data management planning from NSF, NIH, DOE, NASA, NEH

How do you write a DMP?
A Data Management Plan consists of many elements describing the preservation, sharing, and access for your data. For a breakdown of the primary elements to include in your data management plan, see:

- Elements of a Data Management Plan
- Examples of Data Management Plans

Who can you contact if you need help or have questions?
NCSU's Sponsored Programs and Regulatory Compliance Services (SPARCS), working with the NCSU Libraries and NCSU's Office of Information Technology (OIT) Shared Services group, is providing consultation for data management and discovery for research data associated with requirements of grant funding agencies.

For questions or support with writing data management plans or implementing data management practices, contact:

- NCSU Libraries Research Data Services
  library_datamanagement@ncsu.edu

For more information about complying with grant funding requirements, contact:

- John Chaffee
  Director, Sponsored Programs and Regulatory Compliance Services (SPARCS)
  john_chaffee@ncsu.edu

For more information about data storage options at NCSU contact:

- Eric Sills
  Director of Shared Services, NCSU Office of Information Technology
  eric_sills@ncsu.edu

For more information about copyright and intellectual property regarding your data and publications, contact:

- Will Cross
  Director, Copyright & Digital Scholarship Center, NCSU Libraries
  william_cross@ncsu.edu

DATA MANAGEMENT TOOLKIT

Publishing and Curation Services provides this toolkit to help researchers manage their data before, during, and after research is performed. For an overview of data management principles, visit Publishing and Curation Service’s What is Data Management? page.

The data management toolkit is intended to help Penn State faculty develop a data management plan that explains how research outcomes will be described, shared, and preserved for future access. The advice here is based on NSF data management plan requirements, but should also be applicable to other plans.

The data management guidance is divided into the following three sections:

- Describing Data - explains how to identify, describe, and label the data to be collected
- Access - outlines considerations for sharing and distributing data
- Storing and Preserving - addresses long-term plans for data storage and preservation

For more information and a more extensive list of tools, visit Publishing and Curation Services’ Data Management Resources page.

Patricia Hoge, Digital Content Strategist | Head, Scholarly and Academic User Services
Phone: 814-865-3762
Visit the Publishing and Curation Services site for more information on open access at Penn State.
Visit the Data Repositories and Services Guide for more information about tools that help researchers to prepare data management plans.

Service Statement

Need help with data management planning? We ask for the following before a consultation:

- At least a week’s lead time
- A link to the solicitation for the grant program
- A summary of the project you are proposing

We also offer data management instruction!

Email Patricia Hoge, or call at the above number, to arrange a workshop or info session.

Please note: The guidance in this document should be considered only as a guide based on experience working with researchers on data management planning. It should not be construed as legal or compliance advice on specific matters. For specific questions or concerns on legal or compliance matters, please consult with appropriate legal counsel, the Office of the Vice President for Research, or the appropriate program office for your research proposal.

Creator of this research guide:
- Patricia Hoge, Graduate Assistant, 2012-2013
This Guide is for you if you’ve ever...
- Wanted to store your research data safely and securely on a trusted server
- Needed to comply with a funding agency’s requirements for a Data Management Plan
- Wished to link your research data to your research articles
- Wondered how to make sure your research data can be reused over time
- Looked for available data on a given topic, time period or geographic location

Data Management Support at the Texas A&M Libraries

The University Libraries offer a variety of services to support data management efforts by Texas A&M researchers:
- Raising awareness of best practices in data management and data management planning
- Collecting examples of "successful" data management plans submitted with funded proposals
- Consulting with researchers on existing metadata formats and controlled vocabularies that can be used to document data for a particular project
- Assisting in finding data repositories where Texas A&M researchers may submit, share and preserve their data
- Raising awareness of data preservation issues

We invite you to explore the pages of this LibGuide and let us

What Is Data Management?

In the context of research and scholarship, "Data Management" refers to the storage, access and preservation of data produced from a given investigation. Data management is practiced through the entire lifecycle of the data, from planning the investigation to conducting it, and from backing up data as it is created and used to long term preservation of data deliverables after the research investigation has concluded. Specific activities and issues that fall within the category of Data Management include:

- File naming: the proper way to name computer files
- Data quality control and quality assurance
- Data access
- Data documentation (including levels of uncertainty)
- Metadata creation and controlled vocabularies
- Data storage
- Data archiving & preservation
- Data sharing and re-use
- Data integrity
- Data security
- Data privacy
- Data rights
- Notebook protocols (lab or field)

Why Bother with Data Management?

Data Management is useful to investigators because it helps to
- Organize data
- Store and backup data
- Take care of data so it is readily available for ongoing use
- Preserve data for future re-use
- Share data with colleagues
- Comply with university rules and protocols for research integrity
- Comply with funder requirements

Who Is Responsible for Data Management?

Data management is commonly a shared responsibility
- Researchers generally have a high level of expertise in handling and manipulating datasets
- Data scientists may work closely with dataset creators to manipulate, visualize and analyze the data
- Data managers steward the dataset through its life cycle to ensure its usefulness and fitness for re-use both during and after a given research project is concluded.

Data managers may be investigators, research assistants, graduate students, information technology specialists, informaticists, research librarians, or some

Making Data Management Easier

Libraries have been managing information for 4,000 years. Today, your libraries are evolving and building expertise to continue this tradition so that they can help you preserve research data of the past, present, and future.

The Data Management Consulting Group is ready to consult with you on your entire data life cycle, helping you to make the right decisions, so that your scientific research data will continue to be available when you and others need it in the future. Contact us now to start a conversation about your research.
