

## RESEARCH LIBRARY TRENDS

*ARL Statistics 2006–2007* is the latest in a series of annual publications that describe collections, staffing, expenditures, and service activities for the 123 members of the Association of Research Libraries (ARL). Of these, 113 are university libraries; the remaining 10 are public, governmental, and nonprofit research libraries. ARL member libraries are the largest research libraries in North America, representing 16 Canadian and 107 US research institutions. The academic libraries, which comprise about 92% of the membership, include 14 Canadian and 99 US libraries.

Statistics have been collected and published annually for the members of the Association of Research Libraries since 1961–1962, and the data are available through an interactive Web interface. Prior to 1961–1962, annual statistics for university libraries were collected by James Gerould, first at the University of Minnesota and later at Princeton University.<sup>1</sup> These data, covering the years 1907–1908 through 1961–1962, are now called the Gerould statistics.<sup>2</sup> The whole data series from 1908, which is available on the ARL FTP server,<sup>3</sup> represents the oldest and most comprehensive continuing library statistical series in North America.

ARL libraries are a relatively small subset of libraries in North America, but they do account for a large portion of academic library resources in terms of assets, budgets, and the number of users they serve. The total library expenditures of all 123 member libraries in 2006–2007 was more than \$3.9 billion; from that, roughly \$2.9 billion was spent by the 113 university libraries and more than \$866 million by the nonuniversity libraries. The pie charts below show how the two types of libraries divide these expenditures differently.

<sup>1</sup> Kendon L. Stubbs and Robert E. Molyneux, *Research Library Statistics 1907-08 through 1987-88* (Washington, DC: ARL, 1990).

## CHANGE IN COUNTING SERIALS

This year the definition of counting serials in the ARL Statistics was changed — from serials subscriptions we changed to counting serial titles. As a result the trend line of publishing serial cost per subscription is being discontinued and eventually a new one will emerge as we collect annual data on serial titles. This change though simple at first glance is very important as it makes the concept of serials more meaningful in the electronic environment.

What prompted this change? In earlier years the instructions for reporting serials were that libraries report the “total number of subscriptions, not titles, but electronic serials acquired as part of an aggregated package (such as MUSE or Academic’s IDEAL) were to be counted by title.” Directors and other staff have expressed concern that the serials count was problematic since many libraries engage in multiple consortia arrangements and the serials count was inflated by duplicate titles held in multiple packages. The Statistics and Assessment Committee determined that a new way of counting serials focusing on titles would provide better descriptive data reflecting the true scope of the content provided by research libraries. A pilot at various ARL libraries demonstrated the feasibility of the new method.

In the electronic environment once you own or lease a title, it is often accessible by all users so a more authentic descriptive statistic for the scope of the content is titles rather than subscriptions. A unique title count favors broader coverage. Any duplication of those titles through packages, aggregations, bundles, etc., becomes more a management issue. The new definition asks that titles be reported as electronic if available both in print and electronic formats and they be reported as purchased if available both through purchased and non-purchased arrangements. So, if a title appears in both print and electronic form and a library has acquired it through several different providers, it would be counted as one title. Training events were delivered last fall to ensure that there is a well-grounded, shared understanding of the new definitions.

The outcome has been successful as we have more libraries reporting serials titles than they ever managed to report serial subscriptions indicating that the new definition is moving us into the right direction of having data that are both collectable and useful. However, we had to delete all earlier trend lines that were based on serial subscriptions. A variety of resources have been developed for libraries to consult as they implemented the change and they are available through <http://www.arl.org/stats/annualsurveys/arlstats/07statmail.shtml>.

Average annual % change	6.1%	3.1%	4.5%	-4.3%	-1.8	-0.7	1.5%	-0.1	1.4%

Table 1 presents data about select public service activities such as circulation (initial and total), reference transactions, library instruction (group presentations and participants in these presentations), and interlibrary borrowing and lending.

As seen in table 1, the median of group presentations dropped slightly during 2006–2007. However, the number of participants increased with a median of 14,417 for the typical research library. Perhaps what is of most interest is that by 2007 there were double the participants compared to 1991 (see Graph 1).

Operating expenditures, including many automation expenditures, have doubled since 1986, but during the last five years have remained at relatively stable levels of investment. The total salary expenditures median has increased only slightly over the past four years. Monograph expenditures continue to increase. The annual consumer price index (CPI), included in Graph 4, provides a comparative reference for the increases in library expenditures.

Average annual % change	4.8%	1.2%	-0.8%	-1.6%	-1.7%

Over the 22-year period since 1986, ARL libraries are acquiring 30% fewer monographs per student. Libraries reported fewer staff per student in 2006 as compared to 1986: in 2007, there was a median number of 11.4 total staff per 1,000 students, compared to the 1986 figure of 16 per 1,000.

TABLE 6

## ELECTRONIC RESOURCES EXPENDITURES IN ARL UNIVERSITY LIBRARIES, 2006–2007

	Sum	Number Reporting
Expenditures for Computer Files (one-time/monographic purchase)	\$59,808,658	107
Expenditures for Electronic Serials	\$476,225,086	111
Expenditures for Bibliographic Utilities, Networks, etc. (Library)	\$26,771,671	101
Expenditures for Bibliographic Utilities, Networks, etc. (External)	\$18,931,797	84
Expenditures for Hardware and Software	75,169,750	109
Expenditures for Document Delivery/Interlibrary Loan	12,849,607	109

Table 6 contains data on several items which previously had been collected only in the *ARL Supplementary Statistics*. These data are especially useful because they reflect monies spent on all electronic serials, while the *ARL Statistics* categories of “serials purchased” and “serials expenditures” include only those journals that provide full-text electronic versions to their subscribers. The Expenditures for Electronic Serials time series may be viewed as an alternative to the Serials Purchased series, both figures reflecting in their own way the influence the electronic serial is gaining in the modern research library.

Not only have electronic materials expenditures grown sharply in the past decade, they have grown at a rate far exceeding that of library materials expenditures overall. As shown in Graph 6, in every year of the last decade electronic materials expenditures have grown sharply, anywhere between two and ten times faster than materials expenditures have.

The average ARL university library now spends just under 47% of its materials budget on electronic materials (Tables 7A and 7B) and 50 ARL libraries report that they spent more than 50% of their materials budget on electronic materials (see Rank Order Table 20).
